**Subject:** Nave Polaris Use of HSIFO at Houston

TMA,  
Can you please forward the below to the COTP.  
Additionally Navig8 will be submitting a report to the EPA.

Nave Polaris  
Voyage Santos to Houston  
We stemmed 170 mt's for delivery at GOLA with Chemoil but the supply vessel(Miss Claudia) was delayed in port and would not be at GOLA for our arrival (or within the next few days).  
We canceled the GOLA stem and re-booked for Bolivar Rds.  
The vessel arrived at Fairway anchorage 1230/15<sup>th</sup> and waited to shift into Bolivar for the supply.  
PM/18<sup>th</sup> Houston pilots brought the vessel in but on arrival there was not enough room to anchor and had to shift back to Fairway.  
Presently the vessel only has 2.5 mt's LSMGO onboard and will need to switch to LSIFO within the next 24 hours.

Our agents have relayed to the pilots that we are running out of LSMGO and the pilots said they will bring the vessel back in as soon as possible.  
We looked at delivering at Fairway but the suppliers are not willing to go offshore.
